Introduction

The lab basically about migrating the VM from one Hyper-V to another Hyper-V. We will be also removing the iSCSI target and client from the ServerDM1, Server DM2 and server DC1.

We will be also removing the failover cluster from the computer during this

Part 1: Live Migration

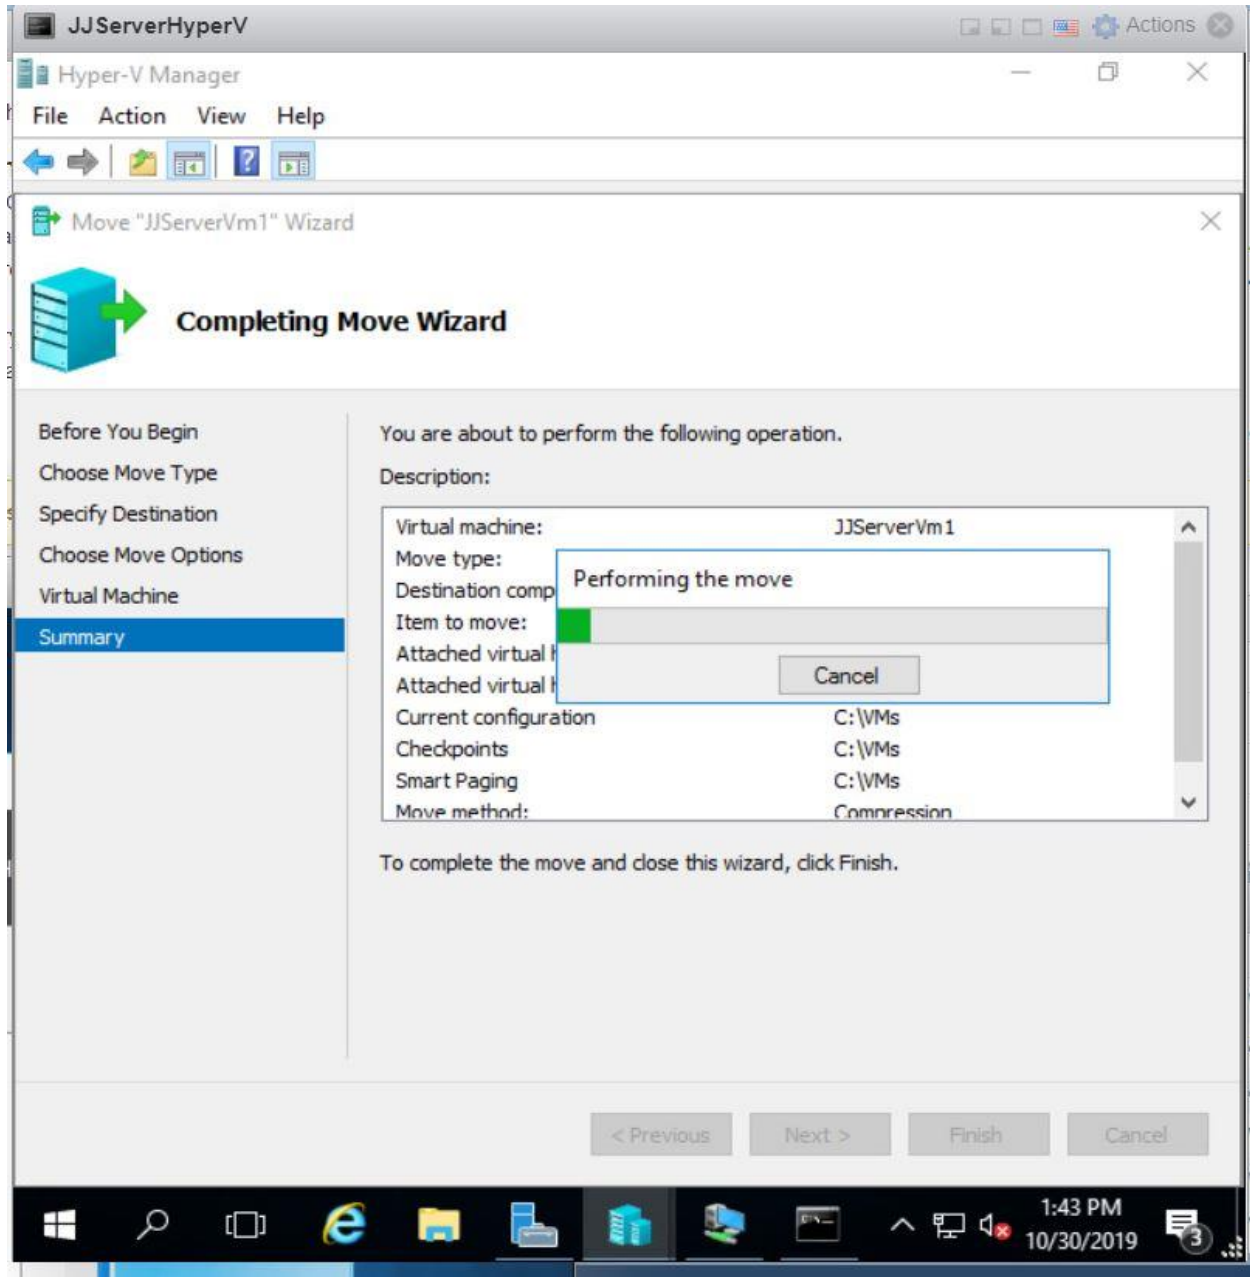

Figure 1: Migrating the Vm from the hyper-v to the server dc1

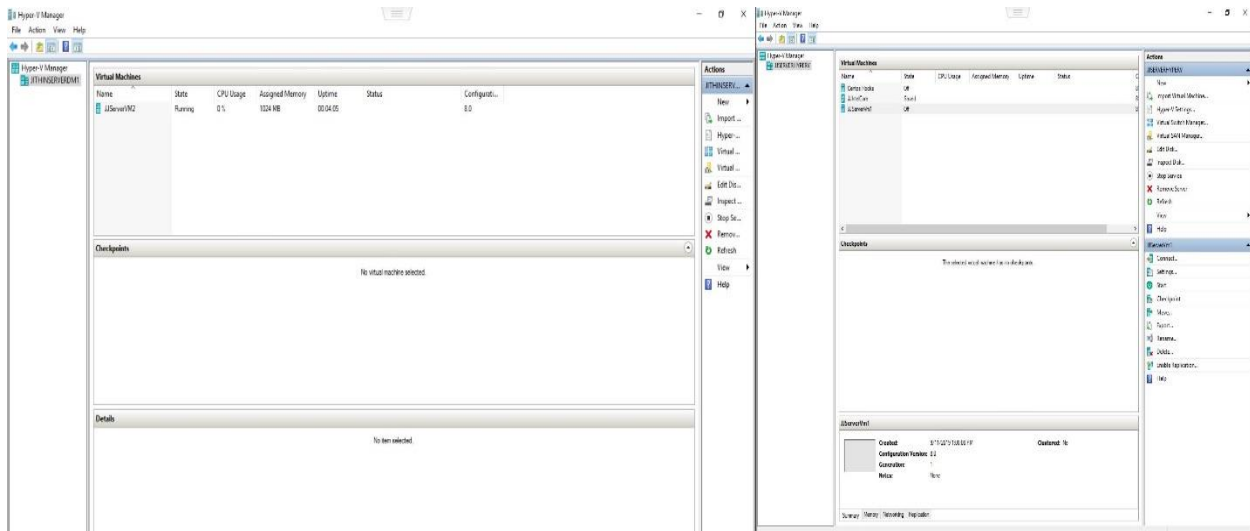

Figure 2: Moved Hyper-v vm

Part 2: Removing the Failover Cluster from the Domain Member

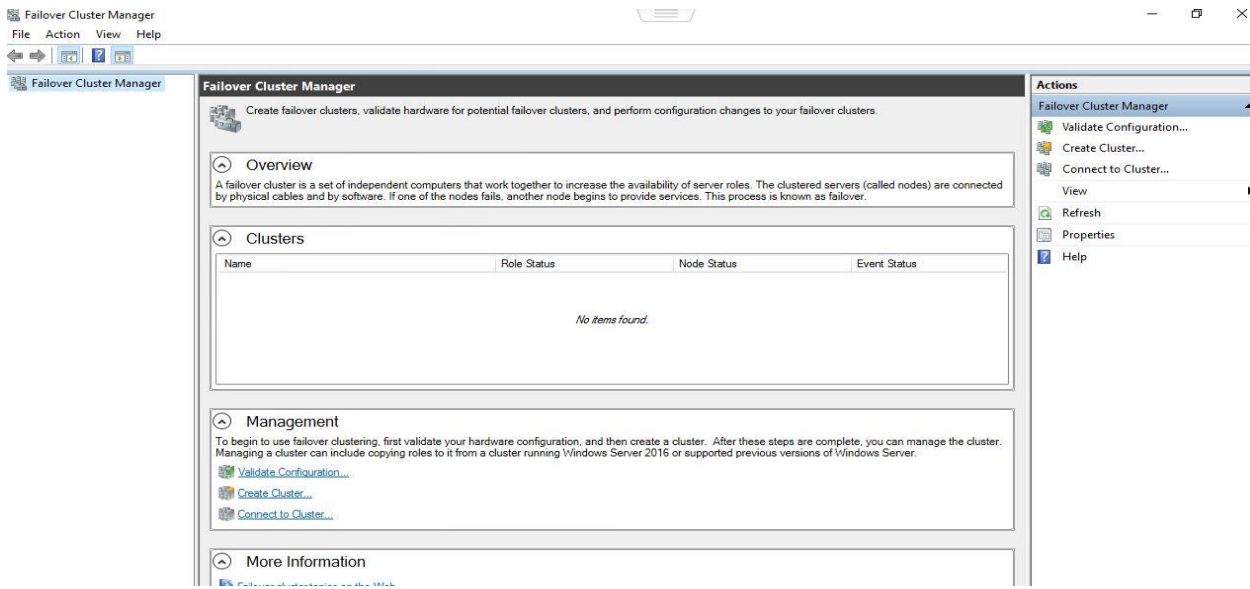

Figure 3: Removed the cluster from the Server DM1

Part 3: Removing the iSCSI from the Domain Member and Controller

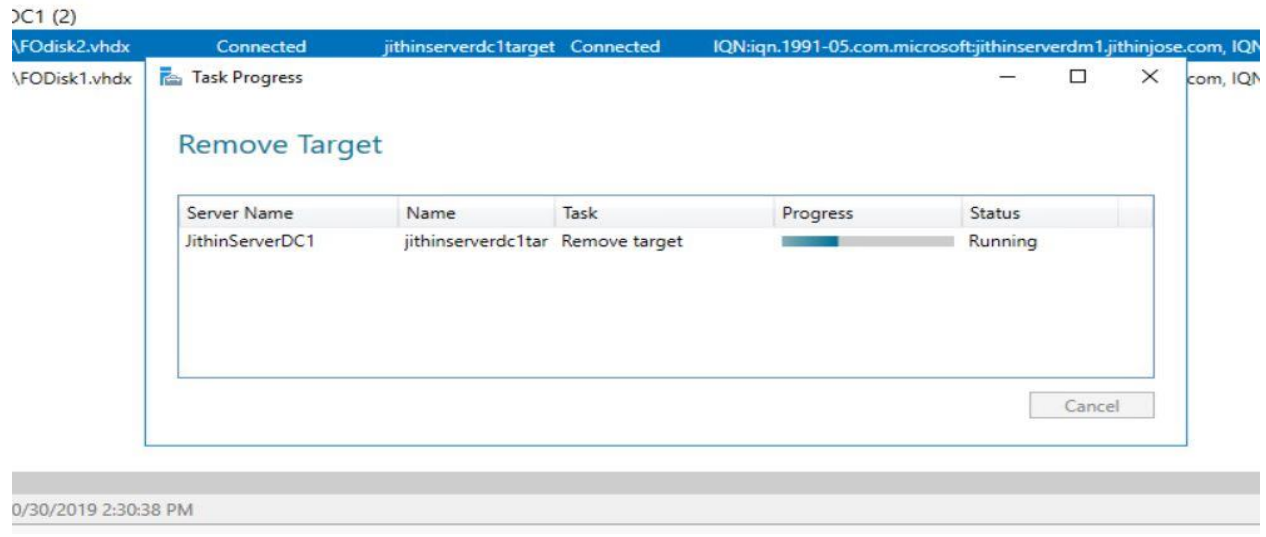

Figure 4: Removing the target and iscsi initiator from the server

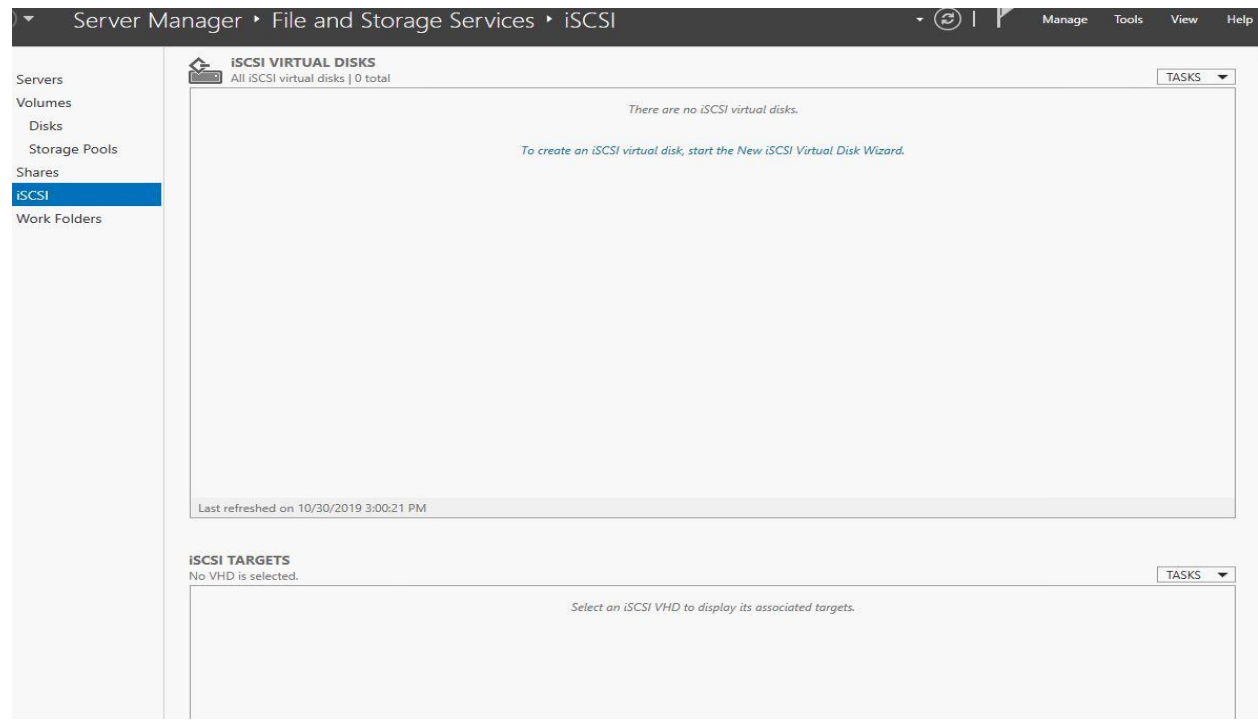

Figure 5: Remove the iscsi from the server dm1

Conclusion

This lab helped me thought me to how to migrate an vm from to hyper to another server which is running hyper- v on the another server as well as how to remove the iSCSI target and initiator. This also thought me how to play with failover cluster manager and how to remove the failover cluster from the server.
